REDACTED.pdf

Rudy and Kevin,

The attached document is the **REDACTED** specification sheet for the part **REDACTED**. This is the part that you purchased. You will see what the tolerances for this part are. Please look at this and forward the following information to me:

What is the minimum tolerance that you can work with, in regard to this specification?
What is the maximum tolerance that you can work with, in regard to this specification?

These two questions are very important in ascertaining what would work in your design in regard to LEDs. For other white colors, please check our site online at **REDACTED**.

On another note, we had spoken about the Warm White LEDs. The ones that are available for purchase are the **REDACTED**. This product has **REDACTED** degree viewing angle and there will be 3 different **REDACTED**s available.

Initially, we will be producing the **REDACTED** color bin. In the future, we will have **REDACTED** and **REDACTED** available. We have been told that customers will be asked to accept all 3 bins at first. As this is a brand new product for us, we only have limited information. As time passes, we will have further information in regard to production. I am including a copy of the tentative Data Sheets for you.

Per chance, were you able to find the samples that I sent you about 3 weeks ago? I am trying to get my hands on more samples, but I am having a hard time, since we sent all of the last batch out.

I look forward to your reply.

Best Regards,

REDACTED

REDACTED,

In our last message we incorrectly stated a requested spec.
